Profile

Accomplished software developer with 17 years of experience building large scale software applications. Expertise in full stack development with an expertise in modern user experience (UX) concepts. Proven know-how to combine creativity with usability to produce world-class web applications.

Experience

Software Developer, Pacific Northwest National Laboratory, Richland WA — 2014-Present

Worked closely with a team of developers as a UX team lead. Managed the process of converting my high-fidelity prototypes to functional products within a specified framework. Projects ranged from laboratory support apps to experimental research projects.

Lead UI Engineer, M33 Integrated Solutions, Greenville SC — 2013-2014

Architected a Java Freemarker tag library for a large scale Transportation Management System (TMS). Integrated all aspects of front-end development including security, computing platform (mobile or desktop), user context and enterprise specific workflow rules.

Sr. Application Developer, Story Group, Kennewick WA — 2009-2013

Oversee all internal and external facing application development including web service API development, transaction auditing and TMS application development. Developed several custom modules for a large scale logistics platform including claim auditing, shipment consolidation, shipment rating engine and shipment quote/ creation applications.

Sr. Application Developer, MedAssets, Yakima WA — 2006-2009

Responsible for conceptual design, development and implementation of complex user interfaces based on strict product requirements.
